This screenshot shows the result of a linear amplifier driving an actor with a capacity of 47nF

1:setpoint
2:Voltage at actor 1:100 , so app 550Vpp
frequency app23kHz

The blue line of "Magnitude frequency Response shows : 50nF 550Vpp =appr 22kHz

Result : this model can drive the demanded Frequency .
It can get scaled up to higher values by factor 2 or 3 !
